

paragraphs 61–63. If the instrument does not have an active market, the entity shall consider valuation techniques and inputs in AG149–AG155) in determining its fair value.

Valuing Financial Guarantees Issued Through a Non-Exchange Transaction

AG131. Only contractual financial guarantees (or guarantees that are in substance, contractual) are within the scope of this Standard (See AG3 and AG4 of IPSAS 28). Non-contractual guarantees are not within the scope of this Standard as they do not meet the definition of a financial instrument. This Standard prescribes recognition and measurement requirements only for the issuer of financial guarantee contracts.

AG132. In paragraph 9, “financial guarantee contract” is defined as “a contract that requires the issuer to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument.” Under the requirements of this Standard, financial guarantee contracts, like other financial assets and financial liabilities, are required to be initially recognized at fair value. Paragraphs 66–68 of this Standard provide commentary and guidance on determining fair value and this is complemented by Application Guidance in paragraphs AG144–AG155. Subsequent measurement for financial guarantee contracts is at the higher of the amount of the loss allowance determined in accordance with paragraphs 73–93 and the amount initially recognized less, when appropriate, cumulative amortization in accordance with IPSAS 9, *Revenue from Exchange Transactions*.

AG133. In the public sector, guarantees are frequently provided by way of non-exchange transactions, i.e., at no or nominal consideration. This type of guarantee is provided generally to further the entity’s economic and social objectives. Such purposes include supporting infrastructure projects, supporting corporate entities at times of economic distress, guaranteeing the bond issues of entities in other tiers of governments and the loans of employees to finance motor vehicles that are to be used for performance of their duties as employees. Where there is consideration for a financial guarantee, an entity should determine whether that consideration arises from an exchange transaction and whether the consideration represents a fair value. If the consideration does represent a fair value, entities should recognize the financial guarantee at the amount of the consideration. Subsequent measurement should be at the higher of the amount of the loss allowance determined in accordance with paragraphs 73–93 and the amount initially recognized, less, when appropriate, cumulative amortization recognized in accordance with IPSAS 9. Where the entity concludes that the consideration is not a fair value, an entity determines the carrying value at initial recognition in the same way as if no consideration had been paid.

AG134. At initial recognition, where no fee is charged or where the consideration is not fair value, an entity firstly considers whether there are quoted prices available in an active market for financial guarantee contracts directly equivalent to that entered into. Evidence of an active market includes recent arm’s length market transactions between knowledgeable willing parties, and reference to the current fair value of another financial guarantee contract that is substantially the same as that provided at nil or nominal consideration by the issuer. The fact that a financial guarantee contract has been entered into at no consideration by the debtor to the issuer is not, of itself, conclusive evidence of the absence of an active market. Guarantees may be available from commercial issuers, but a public sector entity may agree to enter into a financial guarantee contract for a number of non-commercial reasons. For example, if a debtor is unable to afford a commercial fee, and initiation of a project in fulfillment of one of the entity’s social or policy objectives would be put at

risk unless a financial guarantee contract is issued, it may approach a public sector entity or government to issue a financial guarantee contract.

- AG135. Where there is no active market for a directly equivalent guarantee contract; the entity considers whether a valuation technique other than observation of an active market is available and provides a reliable measure of fair value. Such a valuation technique may rely on mathematical models which consider financial risk. For example, National Government W guarantees a bond issue of Municipality X. As Municipality X has a government guarantee backing its bond issue, its bonds have a lower coupon than if they were not secured by a government guarantee. This is because the guarantee lowers the risk profile of the bonds for investors. The guarantee fee could be determined by using the credit spread between what the coupon rate would have been had the issue not been backed by a government guarantee and the rate with the guarantee in place. Where a fair value is obtainable either by observation of an active market or through another valuation technique, the entity recognizes the financial guarantee at that fair value in the statement of financial position and recognizes an expense of an equivalent amount in the statement of financial performance. When using a valuation technique that is not based on observation of an active market an entity needs to satisfy itself that the output of any model is reliable and understandable.
- AG136. If no reliable measure of fair value can be determined, either by direct observation of an active market or through another valuation technique, an entity is required to measure the financial guarantee contract at the amount of the loss allowance determined in accordance with paragraphs 73 to 93.

Subsequent Measurement

- AG137. If a financial instrument that was previously recognized as a financial asset is measured at fair value through surplus or deficit and its fair value decreases below zero, it is a financial liability measured in accordance with paragraph 45. However, hybrid contracts with hosts that are assets within the scope of this Standard are always measured in accordance with paragraph 48.
- AG138. The following example illustrates the accounting for transaction costs on the initial and subsequent measurement of a financial asset measured at fair value with changes through net assets/equity in accordance with either paragraph 106 or 41. An entity acquires a financial asset for CU100 plus a purchase commission of CU2. Initially, the entity recognizes the asset at CU102. The reporting period ends one day later, when the quoted market price of the asset is CU100. If the asset were sold, a commission of CU3 would be paid. On that date, the entity measures the asset at CU100 (without regard to the possible commission on sale) and recognizes a loss of CU2 in net assets/equity. If the financial asset is measured at fair value through net assets/equity in accordance with paragraph 41, the transaction costs are amortized to surplus or deficit using the effective interest method.
- AG139. The subsequent measurement of a financial asset or financial liability and the subsequent recognition of gains and losses described in paragraph AG117 shall be consistent with the requirements of this Standard.

Investments in Equity Instruments and Contracts on Those Investments

- AG140. All investments in equity instruments and contracts on those instruments must be measured at fair value. However, in limited circumstances, cost may be an appropriate estimate of fair value. That may be the case if insufficient more recent information is available to measure fair value, or if there
