

Short Presentation and Video of a web-based Platform supported by INVEST EU ADVISORY HUB in order to help CDLF to absorb total facilities of EUR 875M signed. Before this Assignment Currently CDLF did not have the capacity to process the expected volume of loan requests related to the existing and new EIB facilities, therefore rendering their absorption almost impossible.

The above-described limitation is a common problem for many specialized institutions that do not have the operational capacities to absorb EIB loans.

Briefly describing the system, it is an electronic platform supporting the process of receiving client requests for loans and handling relevant documents. Moreover, the platform will automatically produce all the necessary reports for the customers, department's employees, CDLF management and EIB about the progress of loan requests and also the monitoring of the loans after disbursement.
